

Skeletal System

Directions:

You will create a video, live action mini lesson, or other creative interactive activity on your portion of the skeletal system.

You may choose which format you would like to present in.

Please keep it to 10 minutes or under.

You must also include a worksheet, Handout summarizing your topic, a quiz to be given at the end of the lesson. The worksheet cannot be the same as a handout or a quiz. I need three separate documents.

Be creative, do not just give a list of the body parts. Create a memorable, engaging and informative lesson so your peers will benefit.

In your group of 3 or 4 and choose a subject below. Circle your subject (so you don't forget)

Cranial, Facial bones
Vertebral, Thoracic and Pectoral
Upper Limbs, Lower Limbs
Pelvic Girdle, cartilage and ligaments
Joints / Joint Movement
How bones are made
Diseases and disorders of the skeletal system
Hematopoeisis

I will need a copy of the video or interactive lesson. If it is live you do not need to do this, but let me know before hand.
